PROFESSIONAL SUMMARY

Software Engineer with professional experience developing enterprise applications using **Angular and TypeScript**, along with hands-on experience building full-stack applications using **Node.js, Express.js, and MongoDB**. Skilled in developing reusable UI components, designing RESTful APIs, managing application state, implementing authentication and authorization, and building real-time applications. Experienced with **RxJS, NgRx, MobX, Socket.IO, WebRTC**, and cloud deployment. Strong understanding of **SOLID principles, Dependency Injection, and modular architecture**.

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), TypeScript, SQL
Frontend Development: Angular (v18+), RxJS, Angular Signals, NgRx, MobX, HTML5, CSS3, Tailwind CSS, Bootstrap
Backend Development: Node.js, Express.js, RESTful API Design, Socket.IO, WebSockets, WebRTC
Databases and Caching: MongoDB, Mongoose, MySQL, PostgreSQL, Firebase, Redis
Architecture and Design: SOLID Principles, Repository Pattern, MVC, Dependency Injection, Modular Architecture
Authentication and Security: JWT, OAuth 2.0, Bcrypt, RBAC, HTTP-only Cookies
Cloud and Deployment: AWS EC2, Docker, Nginx, Vercel, Render
Payments and Integrations: Stripe, Razorpay, Nodemailer, Firebase
Tools and Practices: Git, GitHub, Postman, Jira, Figma, Agile Development, Code Review, Debugging, Performance Optimization, AI-Assisted Development

PROFESSIONAL EXPERIENCE

Software Engineer **Sep 2025 – Oct 2026**

Jethur | Kochi, Kerala | Hybrid

- Developed enterprise **Angular and TypeScript** features for a Governance, Risk, and Compliance (GRC) application, contributing to risk assessment and audit planning modules.
- Implemented interactive UI screens, approval workflows, and evidence upload functionality with **REST API integration**.
- Managed complex form and workflow state using **MobX**, maintaining consistent data across multi-step approval processes.
- Built reusable UI components using **Angular and Bootstrap**, following SOLID principles and modular architecture.
- Collaborated with backend developers and QA engineers to translate business requirements into application features, integrate APIs, and resolve issues.
- Used AI-assisted development tools to support implementation, debugging, and code reviews.

KEY PROJECTS

EvenDigo – Event Management and Booking System

GitHub: GitHub Repository

- Developed an event management platform supporting **50+ active users**, with event creation, editing, and organizer analytics.
- Implemented **JWT authentication and RBAC** for secure user access and authorization.
- Integrated **Socket.IO** for real-time chat, supporting 100+ concurrent users.
- Integrated **Stripe payments**, processing 200+ transactions with ticket booking, coupons, refunds, and subscriptions.
- Structured backend services using the **Repository Pattern** to improve code organization and reduce duplication.

RingRing – Video Calling Platform

Live: ring-ring-nine.vercel.app | GitHub: GitHub Repository

- Integrated **WebRTC** for peer-to-peer video calling and implemented a signaling server for connection establishment.
- Implemented authentication using **Firebase OAuth, JWT, and HTTP-only cookies** with a TypeScript backend and Dependency Injection.
- Developed a responsive **Angular 19** interface using Signals, reusable components, and lazy-loaded routes.

ShopEazy – E-commerce Platform

GitHub: GitHub Repository

- Designed **RESTful APIs** for a product catalog containing 1,000+ products and developed a responsive, mobile-first storefront.
- Integrated **Razorpay** checkout with multiple payment options.
- Developed an admin dashboard for order management, inventory tracking, and sales analytics.
- Deployed the application on **AWS EC2** using Docker and Nginx as a reverse proxy.

PingPoll – Real-Time Polling and Chat Platform

Live: pingpoll.vercel.app | GitHub: GitHub Repository

- Built real-time polling and chat functionality using **WebSockets**, synchronizing votes and results across 50+ concurrent users.
- Implemented vote validation and live result aggregation using a **TypeScript backend** and TSyringe for Dependency Injection.
- Implemented Angular route guards and HTTP interceptors for route protection and token handling.

BlogBee – Content Management System

Live: blog-bee-nine.vercel.app | GitHub: GitHub Repository

- Developed a full-stack CMS with user authentication, article CRUD operations, and an admin dashboard.
- Implemented **MongoDB schema validation middleware** to maintain data integrity across content submissions.
- Followed **Clean Architecture and SOLID principles** while developing the frontend and backend.

UMS – User Management System

GitHub: GitHub Repository

- Developed a CRUD-based user management system with secure authentication and **role-based access control (RBAC)**.
- Implemented centralized application state management using **NgRx**.

EDUCATION

Bachelor of Computer Applications (BCA) **2020 – 2023**
PPTM College of Arts and Science, University of Calicut

MEAN Stack Development Intensive Bootcamp Certification **Feb 2024 – Sep 2025**
Brototype, Calicut
